APPLICATION OVERVIEW

The rotator cuff is the group of muscles and their tendons that act to stabilize the shoulder. These muscles start at the shoulder blade and connect to the upper arm to provide the needed stability and mechanics of the shoulder. Causes of rotator cuff injury may include overuse, tears, motion beyond normal limits, or poor throwing form. KT Tape can help treat this condition by providing support and stability, relieving pressure to reduce pain, and increasing circulation.

WHAT YOU NEED

2 strips of KT TAPE
1 full 10" strip
1 full 10" strip cut in half

BEFORE YOU START

APPLY BEFORE ACTIVITY
Apply one hour before beginning activity
